Dear Hiring Committee,

I saw the job post on the **Detroit Pistons careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Intern** at the **Detroit Pistons**. With hands on experience building full stack applications, backend automation, and database driven systems, I am excited about the opportunity to support Basketball Operations' internal web application and technology initiatives.

Here are reasons that make me a great fit for the role:

- **Full-stack web application development:** I built and deployed a full-stack React and MySQL workflow application for the Government of Maharashtra Water Resource Department, digitizing departmental record management and improving operational efficiency by 40 percent, experience directly applicable to building and enhancing the Basketball Operations internal application.

- **Cross-functional collaboration to gather requirements:** At Siemens Industry Software, I worked across engineering and quality teams as Quality Coach and SonarQube Specialist, mentoring 5 engineers and standardizing development practices, experience that translates well to collaborating with coaching, scouting, and analytics departments to implement features.

- **Clean, maintainable coding across languages:** I have hands on experience with JavaScript, SQL, HTML, and CSS alongside Java and Python, and have designed PostgreSQL analytics schemas with materialized views and 16 SQL RPC functions for my Spotify analytics platform, giving me strong grounding in writing efficient, maintainable database driven code.

- **Working with databases and data pipelines:** I engineered a 4-stage Python ETL pipeline processing 71,000+ streaming events and built a PySpark-based pipeline processing a 2.3 million row dataset for demand forecasting, experience that carries over directly to working with pgAdmin4 and Databricks.

- **Debugging, testing, and deploying application updates:** At Siemens, I diagnosed and resolved live production infrastructure issues across 44 environment upgrades and increased automated code coverage from 35 percent to 78 percent, reflecting strong attention to detail in testing and deployment.

I am available to work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to the Detroit Pistons' Basketball Operations technology team.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build tools that support basketball related decision making for such a storied organization.
Regards,
