Dear Hiring Committee,

I saw the job post on the careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Systems Engineer** at **Expel**. With hands on experience automating infrastructure workflows, managing cloud environments, and building internal tools that reduce manual work, I am excited about the opportunity to contribute to **Expel** and help keep IT systems secure, reliable, and easy to use for every team.

Here are reasons that make me a great fit for the role:

- **Automating tasks and integrating systems:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, and built a self-service developer platform adopted by 15 engineers that reduced environment start and stop time by up to 90%.

- **Operating and maintaining production systems reliably:** I executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues across Linux, EC2, databases, and services, and designed an Ansible-based Blue-Green deployment framework that reduced production upgrade downtime by 50% while enabling reliable rollback and recovery.

- **Working with APIs, access management, and modern web standards:** I have hands on experience with REST APIs, Python, Bash, and cloud identity and access workflows, including managing HashiCorp Vault secrets and IAM access policies across production and non-production environments to strengthen security posture.

- **Applying AI tooling and MCP to accelerate work:** My current graduate research builds a two-stage LLM pipeline using Google Gemini for Android bug reproduction, and I designed a 17-tool Model Context Protocol server exposing structured LLM tool-calling for a healthcare eligibility platform, giving me direct experience connecting AI platforms to real systems through emerging standards.

- **Cross-functional ownership and mentorship:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers through structured onboarding, reflecting the customer-first, ownership-driven approach this role calls for.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Expel's mission of keeping infrastructure secure, highly available, and simple to use for every employee.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help Expel's IT team keep breaking the traditional mold while making everyday technology just work.
