Dear Hiring Committee,

I saw the job post on the **JP Morgan Chase** careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **JP Morgan Chase**. With hands on experience building backend services, CI/CD automation, and cloud infrastructure, I am excited about the opportunity to contribute to **JP Morgan Chase** and support enterprise-scale application development.

Here are reasons that make me a great fit for the role:

- **Backend service development and REST APIs:** At Siemens Industry Software, I built and maintained backend infrastructure automation with REST API integrations, replacing legacy scripts and cutting deployment time by 40% across AWS environments.

- **CI/CD pipelines and code quality:** I designed Jenkins-driven, Ansible based Blue-Green deployment pipelines that reduced production upgrade downtime by 50%, and served as Quality Coach and SonarQube Specialist, raising automated code coverage from 35% to 78%.

- **Cloud infrastructure and containerization:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and Terraform, and automated AWS resource provisioning with Terraform, reducing deployment time by 30%.

- **Production support and mentorship:** I executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues across Linux, EC2, and databases while providing on-call incident response, and mentored 5 software engineers through structured onboarding.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **JP Morgan Chase**'s engineering organization and its enterprise-scale backend systems.

Please find my CV attached below. I look forward to hearing from you. I would be excited to bring my backend and cloud automation experience to a team building resilient, large-scale financial technology systems.

Regards,
