Dear Hiring Committee,

I saw the job post on the **NetApp** careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Cloud Native Software Engineer** at **NetApp**. With hands on experience in Go, Kubernetes, and multi-cloud infrastructure, I am excited about the opportunity to contribute to the **Trident** team and its mission of solving persistent storage for containerized applications.

Here are reasons that make me a great fit for the role:

- **Go programming experience:** I developed a Go and Terratest automated testing framework at Siemens Industry Software that caught 95% of infrastructure misconfigurations before they reached production.

- **Kubernetes and cloud service experience:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, and automated AWS infrastructure workflows with Python (Boto3), cutting deployment time by 40%.

- **Linux and network troubleshooting:** I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure and network issues across Linux, EC2, and database services without service interruption.

- **GitHub, CI build systems, and automated testing:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and as Quality Coach and SonarQube Specialist I raised automated test coverage from 35% to 78% across an Agile Release Train.

- **Agile software development and problem solving:** I worked within Agile/Scrum teams throughout my time at Siemens, mentoring 5 engineers while troubleshooting complex live infrastructure problems under production constraints.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to NetApp's Trident team and its work advancing persistent storage for Kubernetes.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build on Trident's open-source leadership in cloud native storage.
