Dear Hiring Committee,

I saw the job post on the Pluribus Digital careers site and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **Associate Software Engineer (CMS-HIOS)** at **Pluribus Digital**. With hands on production experience in automated testing, CI/CD quality gates, and defect diagnosis, I am excited about the opportunity to contribute to **Pluribus Digital** and support the **CMS Health Information Oversight System** team.

Here are reasons that make me a great fit for the role:

- **Design, develop, test, and maintain software solutions:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40 percent across AWS environments, while diagnosing and resolving live defects across Linux, EC2, and databases.

- **Reusable test suites, defect management, and traceability:** As a Software Developer Intern at Siemens, I developed a Go and Terratest automated testing framework that caught 95 percent of misconfigurations pre production, building my experience designing repeatable, traceable test coverage.

- **Quality gates, code reviews, and engineering best practices:** As Quality Coach and SonarQube Specialist for the Agile Release Train at Siemens, I increased automated code coverage from 35 percent to 78 percent by enforcing coding standards and CI/CD quality gates, and mentored 5 engineers through structured onboarding.

- **Accessibility and test automation in modern applications:** On my PolicyPilot healthcare project, I implemented a PDF to structured data pipeline with Vitest unit and integration tests and axe-core accessibility (WCAG AA) coverage across every data boundary, reflecting the same rigor CMS-HIOS testing requires.

- **Agile collaboration:** Across my roles I have worked closely with engineers, DevOps, and cross-functional stakeholders in Agile Release Trains, participating in sprint planning, estimation, and retrospectives while delivering reliable software.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Pluribus Digital's mission of improving how government serves the public.

Please find my CV attached below. I look forward to hearing from you. I would be glad to support a team doing work that has such direct, meaningful impact on public health oversight.
Regards,
