Dear Hiring Committee,

I saw the job post on **Steampunk's careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **MLOps Engineer** at **Steampunk**. With hands on experience automating cloud infrastructure, CI/CD pipelines, and Kubernetes deployments, I am excited about the opportunity to contribute to Steampunk's AI & Data Exploitation Practice and support operationalizing ML systems for mission stakeholders.

Here are reasons that make me a great fit for the role:

- **ML pipeline and lifecycle automation:** At Siemens Industry Software, I automated infrastructure workflows with Python (Boto3), replacing legacy scripts and cutting deployment time by 40% across AWS environments, and built config-driven, versioned pipeline harnesses in my graduate research on LLM-based Android bug reproduction, achieving a 25.7x latency reduction over a published baseline.

- **CI/CD and containerized deployment:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50% while enabling reliable rollback and recovery.

- **Cloud platform and infrastructure-as-code experience:** I have hands on AWS experience (EC2, S3, Lambda) alongside Terraform and Ansible for infrastructure provisioning, and I executed 44 production environment upgrades in 4 months, diagnosing live infrastructure issues using CloudWatch and Datadog observability tooling.

- **DevSecOps and monitoring:** I managed HashiCorp Vault secrets and IAM access policies across production and non-production environments, and used CloudWatch and Datadog log correlation for root-cause analysis and performance monitoring.

- **Collaboration and standards enforcement:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% and mentored 5 software engineers, reflecting my ability to define and enforce reusable engineering standards across teams.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Steampunk's mission driven engineering culture.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help strengthen the infrastructure behind Steampunk's mission critical AI systems.
Regards,
