Dear Hiring Committee,

I saw the job post on **Amazon's careers site** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Dev Engineer, Firmware Builder Services** at **Amazon Data Services (AWS EC2 Core Compute)**. With hands on experience owning features end to end across frontend, backend, and database, and building automation on AWS, I am excited to contribute to the Business Operations Automation team's mission of increasing efficiency across AWS Hardware Engineering.

Here are reasons that make me a great fit for the role:

- **Full software development lifecycle experience:** At Siemens Industry Software, I owned coding, code reviews, source control, build processes, testing, and operations across 2 years, executing 44 production environment upgrades in 4 months while pushing changes multiple times a week in a fast paced environment.

- **Object oriented design and large scale systems:** I designed and built distributed backend automation in Python (Boto3) against AWS services including EC2 and S3, replacing legacy scripts and reducing deployment time by 40%. I also designed an Ansible based Blue-Green deployment framework that cut production upgrade downtime by 50%.

- **Full stack ownership of tools end to end:** On PolicyPilot, I built a complete React, TypeScript, and Node.js application with a 17-tool MCP server exposing structured automation APIs, owning frontend, backend, and database design end to end. I have similarly full-stack owned a FastAPI and PostgreSQL forecasting service processing a 2.3M-row dataset.

- **Ambiguous, self-starter environments:** As Quality Coach and SonarQube Specialist, I identified process gaps independently and increased automated code coverage from 35% to 78% while mentoring 5 engineers through onboarding, reflecting the self-starter ownership this role calls for.

I am available to work full-time after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to AWS Hardware Engineering's internal tooling.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the tools that keep AWS's massive hardware supply chain running.
