Dear Hiring Committee,

I saw the job post on **General Motors' careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **ML Infrastructure Engineer** at **General Motors**. With hands on experience building backend services, distributed systems, and cloud infrastructure across AWS, Kubernetes, and GitOps pipelines, I am excited about the opportunity to contribute to **General Motors** and support the scaling of the ML platform.

Here are reasons that make me a great fit for the role:

- **Designing core backend platform components:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python and Boto3, replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, and executed 44 production environment upgrades in 4 months while diagnosing live infrastructure issues.

- **Cloud platform experience (GCP, Azure, AWS):** I have hands on experience with AWS, Google Cloud Platform, and Microsoft Azure, and I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault.

- **Distributed systems at scale:** I designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%, and my graduate research built a distributed, GPU backed LLM pipeline achieving a 25.7x latency reduction over a published baseline across 20+ Android apps.

- **Go, Python, and system efficiency:** I have hands on experience with Go, Python, and C++, including a Go and Terratest framework I built that caught 95% of infrastructure misconfigurations pre-production, reflecting the language versatility this role calls for.

- **Driving improvements and cross-team collaboration:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% and mentored 5 software engineers, working across teams to raise engineering standards.

I am available for full-time after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to General Motors' ML ecosystem.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help GM scale the platform behind its vision of zero crashes, zero emissions, and zero congestion.
