Dear Hiring Committee,

I saw the job post on **Ladders** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer (L2)** at **Ladders**. With hands on experience designing scalable backend systems and APIs on AWS, operating distributed production infrastructure, and adhering to CI/CD practices, I am excited about the opportunity to contribute to reliable, cloud enabled platform work.

Here are reasons that make me a great fit for the role:

- **Production-grade backend code in a modern language:** At Siemens Industry Software, I wrote and operated Python (Boto3) automation for infrastructure workflows, replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments over two years of production engineering.

- **Large-scale distributed systems on AWS:** I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure issues across Linux, EC2, databases, and distributed services, while participating in operational on-call style troubleshooting.

- **Container orchestration experience:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible based Blue-Green deployment framework that reduced upgrade downtime by 50%.

- **Async processing and API design:** In my PolicyPilot project, I built a 17-tool MCP server exposing structured async tool-calling APIs consumable by external AI agents, and in my NYC Mobility Forecasting project I served real-time predictions through a FastAPI REST API backed by PostgreSQL and Redis.

- **CI/CD and engineering quality:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing CI/CD quality gates, and mentored 5 engineers on scalable software engineering principles.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Ladders.

Please find my CV attached below. I look forward to hearing from you. I would be excited to bring my backend and cloud infrastructure experience to a team focused on delivery excellence and reliability at scale.

Regards,
