Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **Oklo Inc.**. With hands on experience building Python automation, CI/CD pipelines, and data driven infrastructure tools, I am excited about the opportunity to contribute to **Oklo Inc.** and support the software behind advanced fission reactor design.

Here are reasons that make me a great fit for the role:

- **Transforming and optimizing data storage and pipelines:** At Siemens Industry Software, I engineered a PostgreSQL analytics schema with materialized views, composite indexes, and 16 SQL RPC functions for a personal analytics platform, and built a 4-stage Python ETL pipeline processing 71K+ events with custom rate limiting and retry handling.

- **Designing and configuring CI/CD pipelines:** I designed GitLab CI/CD and ArgoCD based GitOps pipelines at Siemens, and built a Go and Terratest framework that caught 95% of infrastructure misconfigurations before production, reflecting the automated pipeline rigor this role calls for.

- **Building tools for engineers to visualize and evaluate results:** I built a RESTful FastAPI service serving real time demand predictions to a React and map based dashboard for my NYC Mobility Forecasting project, and a 17-tool MCP server exposing structured data queries for healthcare eligibility comparisons in PolicyPilot.

- **Fluency in Python and Git, with proficiency in CI/CD:** I have hands on Python experience across Boto3 based AWS automation, FastAPI backend services, and PySpark data pipelines, all version controlled with Git and deployed through GitLab CI/CD and Jenkins pipelines.

- **Improving process efficiency through software:** I automated Teamcenter X infrastructure workflows with Python, replacing legacy Ruby scripts and cutting deployment time by 40%, and designed an Ansible based Blue-Green deployment framework that reduced upgrade downtime by 50%.

I am available for full-time after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Oklo's mission of powering the future with clean, reliable fission energy.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the software behind the next generation of nuclear reactors.
Regards,
