Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **AI Engineering Fellow** at **ProMazo**. With hands on experience building LLM powered applications, retrieval augmented pipelines, and production cloud systems, I am excited about the opportunity to contribute to ProMazo's client engagements and help enterprise teams ship agents they can rely on.

Here are reasons that make me a great fit for the role:

- **LLM powered and agentic system design:** I designed a two stage memory augmented LLM pipeline for Android bug reproduction, evaluated against a published GPT-4o based baseline across 53 runs on 20+ apps, achieving a 25.7x latency reduction while preserving task completion fidelity. I also built a provider agnostic LLM abstraction layer supporting Gemini, GPT-4o, Llama, and Qwen.

- **Retrieval augmented generation and tool calling agents:** In PolicyPilot, I architected an evidence grounded RAG pipeline over Google Gemini 2.5-flash that forces citation backed answers to eliminate hallucination in high stakes healthcare decisions, and designed a 17-tool MCP server exposing structured tool calling for external AI agents.

- **Python fundamentals and LangChain experience:** I built Spendora, an LLM powered finance assistant using LangChain with RAG and custom toolchains, deploying conversational agents with memory and tool use to automate expense categorization.

- **Testing and evaluation rigor:** My graduate research relies on structured evals comparing my pipeline against a published baseline to catch failure modes and quantify accuracy and latency tradeoffs before drawing conclusions, a discipline I would bring directly to client facing agent evaluation.

- **Comfort with ambiguity and client communication:** At Siemens, I diagnosed live production issues across 44 environment upgrades in 4 months and worked directly across teams as Quality Coach, translating technical findings into standards adopted org wide.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to ProMazo's mission of giving students real ownership on Fortune 500 engagements.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help a ProMazo team turn discovery conversations into agents that enterprise clients actually trust and rely on.
Regards,
