Dear Hiring Committee,

I saw the job post on **P&G Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **University of Cincinnati R&D Engineer Co-op** at **Procter & Gamble**. With hands on experience building data pipelines, machine learning models, and analytics tools, I am excited about the opportunity to contribute to **Procter & Gamble** R&D and support the Data Science and Modeling & Simulation innovation goals.

Here are reasons that make me a great fit for the role:

- **Transforming data and algorithms into simple, actionable conclusions:** For my NYC Mobility Forecasting project, I built a two stage Poisson hurdle model predicting demand across 263 zones from a 2.3 million row dataset, improving forecast accuracy (MAPE 18.77 percent to 16.52 percent) and cutting RMSE 43 percent over a baseline Random Forest, then served the results through a FastAPI backend to a dashboard non technical stakeholders could read directly.

- **Computer programming and engineering experience across design, testing, and deployment:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python and Boto3, cutting deployment time 40 percent, and executed 44 production environment upgrades in 4 months, giving me hands on experience shipping and supporting production systems end to end.

- **Data science and advanced analytics for better decision making:** My current graduate research applies a two stage memory augmented LLM pipeline using Google Gemini and Vertex AI, achieving a 25.7x latency reduction over a published baseline while preserving task completion fidelity, work that required turning complex model behavior into a clear, defensible comparison.

- **Cross functional collaboration and communication:** As Quality Coach and SonarQube Specialist at Siemens, I increased automated code coverage from 35 percent to 78 percent and mentored 5 engineers, experience that sharpened my ability to explain technical tradeoffs to partners outside my immediate team.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Procter & Gamble's R&D organization.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help advance innovations that reach billions of consumers worldwide.

Regards,
