Dear Hiring Committee,

I saw the job post on **Waymo's careers site** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, Booking** at **Waymo**. With production experience building backend distributed systems, scalable APIs, and highly available infrastructure, I am excited about the opportunity to contribute to Waymo's Booking team and help power the front door to the Waymo Driver.

Here are reasons that make me a great fit for the role:

- **Backend distributed systems experience:** At Siemens Industry Software, I built backend automation services in Python against AWS infrastructure, replacing legacy scripts and cutting deployment time by 40 percent. I migrated 40+ production environments to Kubernetes using ArgoCD and Helm, architecting scalable service infrastructure that supported both internal and partner facing systems.

- **High reliability and fault tolerance for user facing infrastructure:** I owned 44 production environment upgrades in 4 months, diagnosing live infrastructure issues across Linux, EC2, and databases to keep services highly available. I also designed an Ansible based Blue Green deployment framework that reduced production upgrade downtime by 50 percent while enabling reliable rollback.

- **Programming breadth including C/C++ and low latency systems:** I have hands on experience with Java, Python, C/C++, Go, and SQL. My graduate research involved building a two stage distributed pipeline for real time Android automation, cutting end to end latency 25.7x while preserving task completion fidelity under real time constraints.

- **Cross functional collaboration:** As Quality Coach and SonarQube Specialist at Siemens, I raised automated code coverage from 35 percent to 78 percent and mentored 5 engineers while working closely with product and QA teams, experience I would bring to collaborating with Booking's iOS, Android, product, and design partners.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Waymo and helping build reliable, low latency booking experiences for autonomous ride-hailing.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the systems that let people safely hail the world's most experienced driver.
Regards,
