Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, Data and Automation** at **PNC**. With hands on experience building Python automation, cloud infrastructure, and CI/CD release pipelines on AWS, I am excited about the opportunity to contribute to **PNC** and support the Data and Automation organization's mission of scalable, risk-aware software solutions.

Here are reasons that make me a great fit for the role:

- **Technical design and development of complex solutions:** At Siemens Industry Software, I designed and developed Teamcenter X infrastructure automation with Python and Boto3 on AWS, replacing legacy Ruby scripts and cutting deployment time by 40%, while executing 44 production environment upgrades in 4 months.

- **Collaboration with product owners, architects, and engineers:** I worked with architects and engineers to design an Ansible based Blue-Green deployment solution that reduced production upgrade downtime by 50%, and migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD in alignment with enterprise standards.

- **Agile delivery, CI/CD, and automated testing:** I built CI/CD release pipelines with GitLab and GitHub integrated workflows, and as Quality Coach and SonarQube Specialist I drove automated testing adoption that raised code coverage from 35% to 78% across an Agile Release Train.

- **Python and AWS application development:** My graduate research applies Python to a memory-augmented LLM pipeline for Android bug reproduction, and my NYC Mobility Forecasting project used Python and PySpark to build a demand forecasting system across 263 zones on a 2.3M-row dataset, cutting RMSE by 43% over baseline.

- **Technical documentation and process improvement:** I authored design artifacts and onboarding documentation while mentoring 5 engineers, and consistently focused on process improvements that reduced deployment and downtime metrics across production systems.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to PNC's Data and Automation team.

Please find my CV attached below. I look forward to hearing from you. I would be excited to bring my Python, AWS, and automation experience to a team building scalable solutions for PNC's customers.
Regards,
