Dear Hiring Committee,

I saw the job post shared by **Siri InfoSolutions** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Cloud Software and Automation Engineer** on the **GCP and Go** team. With hands on experience writing Go automation, provisioning cloud infrastructure with Terraform, and orchestrating Kubernetes deployments, I am excited about the opportunity to contribute to your client's cloud native services.

Here are reasons that make me a great fit for the role:

- **Go automation experience:** At Siemens Industry Software, I developed a Go and Terratest framework for infrastructure validation, catching 95% of misconfigurations pre-production, and automated Teamcenter X infrastructure workflows with Python (Boto3), cutting deployment time by 40% across AWS environments.

- **Infrastructure as Code with Terraform:** I automated provisioning of AWS resources with Terraform, writing modular, production ready configurations that reduced deployment time by 30%, directly applicable to provisioning scalable Google Cloud environments.

- **Container orchestration:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50%.

- **CI/CD and security:** I built GitOps based CI/CD pipelines with GitLab CI/CD and ArgoCD for auditable, rollback capable deployments, and managed HashiCorp Vault secrets and IAM access policies across production and non-production environments.

- **Debugging distributed systems:** I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure issues across Linux, EC2, databases, and containerized services under production constraints.

I am available to start after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to your client's cloud automation and platform reliability initiatives.

Please find my CV attached below. I look forward to hearing from you. I would be excited to bring my Go and cloud infrastructure background to a team focused on eliminating operational friction and scaling cloud native services.
