Dear Hiring Committee,

I saw the job post on **Amazon Jobs** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Systems Development Engineer** at **Amazon Core Search**. With hands on experience automating, deploying, and supporting production infrastructure, I am excited about the opportunity to contribute to Amazon Search's operational excellence program and help keep search systems healthy and resilient.

Here are reasons that make me a great fit for the role:

- **Automating, deploying, and supporting infrastructure:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments. I also migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, modernizing aging deployment architecture.

- **Programming and Linux/Unix systems:** I have hands on experience in Python, Java, and Go, and worked daily across Linux and EC2 environments. I served as on-call engineer for 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure issues to keep systems available.

- **Computer science fundamentals:** My graduate coursework in Advanced Algorithms and Database Theory, combined with production experience building object-oriented backend services, has strengthened my ability to reason about data structures, complexity, and system design.

- **CI/CD pipelines and build processes:** I designed an Ansible-based Blue-Green deployment framework and GitLab CI/CD pipeline that reduced production upgrade downtime by 50% while enabling reliable rollback and recovery.

- **GenAI for tooling and incident response:** As a graduate researcher, I designed a memory-augmented GenAI pipeline that automates Android bug reproduction from screen recordings, achieving a 25.7x latency reduction over a published baseline, work directly relevant to automating operational toil with GenAI.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Amazon Search's mission of keeping search operationally excellent for hundreds of millions of customers.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help drive the automation and reliability behind one of the largest search systems on the Internet.

Regards,
