Dear Hiring Committee,

I saw the job post on the Amazon careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Engineer** on **CloudWatch Application Observability** at **Amazon**. With production experience designing and operating distributed AWS services and using CloudWatch metrics to diagnose live infrastructure issues, I am excited about the opportunity to contribute to **Amazon** and help build observability solutions that let customers reliably operate their applications and AI agents.

Here are reasons that make me a great fit for the role:

- **Professional software development and design/architecture experience:** At Siemens Industry Software, I spent two years designing and operating distributed, multi-tiered Teamcenter X production services on AWS, automating infrastructure workflows with Python (Boto3) and reducing deployment time by 40%.

- **Object-oriented design and reliable, scalable systems:** I designed an Ansible based Blue-Green deployment architecture applying reliability and fault-tolerant design patterns, cutting production upgrade downtime by 50%, and migrated 40+ environments to a multi-tiered Kubernetes architecture using ArgoCD, Helm, and GitLab CI/CD.

- **Operating and observing live production systems:** I diagnosed live infrastructure issues across 44 production environment upgrades in 4 months, using CloudWatch metrics and log correlation across Linux, EC2, and databases to catch and resolve problems quickly, experience directly relevant to building observability tooling customers depend on.

- **Full software development life cycle and code quality:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates across source-controlled, tested build pipelines.

- **Mentoring and force-multiplying a team:** I mentored 5 software engineers through structured onboarding and technical documentation, accelerating their ramp-up and the team's overall productivity.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to CloudWatch Application Observability's mission of helping customers operate their traditional and agentic workloads with confidence.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the observability experiences that let customers trust and operate their applications at AWS scale.
