Dear Hiring Committee,

I saw the job post on **Disney Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer I** at **The Walt Disney Company**. With hands on experience building full stack applications, REST APIs, and reliable deployment pipelines, I am excited about the opportunity to contribute to Disney Entertainment and ESPN Product & Technology and support the Rights & Accounting fleet's supply chain applications.

Here are reasons that make me a great fit for the role:

- **Full stack development with AI powered tools:** I built PolicyPilot, a full stack TypeScript application (React UI, Node/Express API layer, PostgreSQL data layer) that integrates a Generative AI API (Gemini) through a RAG pipeline and a 17-tool MCP server, adding intelligent automation while keeping every response citation backed and validated with Zod schemas.

- **Programming, OOP, and API fundamentals:** I have hands on experience with Java, TypeScript, Python, and JavaScript, and I apply object-oriented design principles and RESTful API concepts daily. At Siemens Industry Software, I built REST API automation for Teamcenter X infrastructure workflows with Python, reducing deployment time by 40%.

- **Source control, data persistence, and build tooling:** I use Git for source control on every project, and I have hands on experience with both SQL (PostgreSQL, MySQL) and NoSQL (MongoDB) data persistence, along with Docker and Jenkins-style CI/CD pipelines for building and deploying applications.

- **Peer review and production support:** As Quality Coach and SonarQube Specialist at Siemens, I led peer reviews of code, solution designs, and system configurations, raising automated code coverage from 35% to 78%. I also investigated and resolved 44 production incidents in four months, diagnosing live infrastructure issues across Linux, EC2, and databases.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Disney Entertainment and ESPN Product & Technology and helping build the systems that govern and track rights and availability of Disney media.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the technology that powers storytelling for millions of Disney fans around the world.
