Dear Hiring Committee,

I saw the job post on **the Fisher Auto Parts careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **Fisher Auto Parts**. With hands on experience building full stack applications, REST APIs, and cloud automation, I am excited about the opportunity to contribute to **Fisher Auto Parts** and support your core point-of-sale platform and the applications connected to it.

Here are reasons that make me a great fit for the role:

- **Full-stack React/TypeScript/Node development with REST APIs and shared schema contracts:** I built PolicyPilot, a full-stack TypeScript app pairing a React SPA with a Node/Express REST API, where I designed 17 tool endpoints validated by Zod schemas at every data boundary to eliminate a class of runtime type-mismatch bugs, a pattern directly aligned with keeping your platform and downstream consumers in sync.

- **Data-dense, interactive UI:** I built a React and TypeScript dashboard for a personal analytics platform on top of a PostgreSQL analytics schema with materialized views and composite indexes, keeping data-heavy views fast and responsive, similar to the high-density tables and filtering your platform needs.

- **AWS and secure cloud automation:** At Siemens Industry Software, I automated infrastructure workflows with Python and Boto3 using IAM roles rather than static credentials, cutting deployment time 40% across AWS environments, and executed 44 production environment upgrades in 4 months while diagnosing live issues across Linux, EC2, and databases.

- **Quality, testing, and collaborative delivery:** As Quality Coach and SonarQube Specialist at Siemens, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 engineers through structured onboarding, the same discipline I bring to writing tests as part of the work and reviewing teammates' code.

- **AI-native development:** My current graduate research uses LLM agents (Gemini, Vertex AI) to automate Android testing workflows, and I regularly use AI coding agents across planning, implementation, and review while staying accountable for the correctness of everything I ship.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Fisher Auto Parts** and helping build the software that keeps your stores and teams running every day.

Please find my CV attached below. I look forward to hearing from you. **It would be a privilege to help build the platform behind a company with such a long track record of serving its customers well.**
