Dear Hiring Committee,

I saw the job post on **Uber's careers site** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer II** at **Uber**. With hands on experience building distributed cloud infrastructure, backend automation, and AI agent driven workflows, I am excited about the opportunity to contribute to Uber's **Data and Storage and cyber defense engineering teams**.

Here are reasons that make me a great fit for the role:

- **Scalable, high performance production systems:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, and executed 44 production environment upgrades in 4 months while debugging and monitoring live infrastructure across Linux, EC2, and databases without service interruptions.

- **AI agent driven workflows:** My graduate research and PolicyPilot project involve designing LLM agent pipelines end to end, including a 17-tool MCP server exposing structured tool-calling for automated document extraction and evaluation, and a memory-augmented LLM agent pipeline that achieved a 25.7x latency reduction over a published baseline for Android bug reproduction.

- **Cloud and containerized platforms:** I migrated 40+ production environments from process-based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, and designed an Ansible-based Blue-Green deployment framework that reduced production upgrade downtime by 50% while enabling reliable rollback.

- **Programming and data foundations:** I have hands on experience with Python, Go, Java, C/C++, SQL, and MySQL, applying data structures and algorithms across backend services, REST APIs, and full-stack production applications throughout the SDLC.

- **Engineering quality and collaboration:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers through structured onboarding.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Uber's cyber defense engineering and helping build the systems that keep Uber's platform secure at global scale.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the AI-driven cyber defense capabilities that protect a platform millions of people rely on every day.
Regards,
