Dear Hiring Committee,

I saw the job post on the Amazon careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Dev Engineer, Digital Twin** at **Amazon Leo**. With production experience building distributed backend services, AWS automation, and reliable deployment systems, I am excited about the opportunity to contribute to **Amazon Leo** and support the Power System team's work monitoring and predicting satellite power performance.

Here are reasons that make me a great fit for the role:

- **Production software development experience:** At Siemens Industry Software, I spent two years building and operating production services, automating infrastructure workflows with Python (Boto3) across AWS environments and cutting deployment time by 40%.

- **Distributed systems and cloud services:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50% through automated fault recovery.

- **Telemetry, monitoring, and anomaly detection:** I executed 44 production environment upgrades in 4 months, monitoring live infrastructure health, diagnosing anomalies, and resolving issues across Linux, EC2, and databases, work that mirrors the real-time monitoring and fault escalation this role requires.

- **Python and data pipelines:** My NYC Mobility Forecasting project used PySpark and scikit-learn to build a predictive pipeline over a 2.3M-row time-series dataset, improving forecast accuracy 18.77% to 16.52% MAPE, experience directly applicable to predicting satellite energy state from orbital and activity data.

- **Testing, CI/CD, and operational excellence:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 engineers through structured onboarding.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Amazon Leo's mission of delivering reliable connectivity to underserved communities.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the ground services that keep a LEO satellite constellation powered and operating reliably.
Regards,
