Dear Hiring Committee,

I saw the job post on **Axon's careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer I** at **Axon**. With hands on experience building infrastructure automation, provisioning platforms, and cloud native deployment systems, I am excited about the opportunity to contribute to **Axon** and support the infrastructure provisioning and automation platform that lets engineering teams self-serve infrastructure such as databases and Kubernetes clusters.

Here are reasons that make me a great fit for the role:

- **Building self-service infrastructure platforms:** At Siemens Industry Software, I built a self-service developer platform with a dashboard and CLI/YAML automation for infrastructure lifecycle management on AWS, adopted by 15 engineers and cutting provisioning turnaround 70 percent, from 10 minutes to 3 minutes.

- **Writing Go for infrastructure tooling:** As a Software Developer Intern at Siemens, I developed a Go and Terratest framework that caught 95 percent of infrastructure misconfigurations before they reached production, alongside Terraform automation that reduced deployment time by 30 percent.

- **Debugging cloud native distributed systems:** I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure issues across Linux, EC2, databases, and Kubernetes services, and migrated 40 plus production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault.

- **Managing infrastructure as code across cloud providers:** I have hands on experience with Terraform, Terragrunt, AWS, and Azure, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50 percent while enabling reliable rollback and recovery.

- **Supporting engineering teams through documentation and mentorship:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35 percent to 78 percent and mentored 5 software engineers through structured onboarding and standardized development practices.

I am available to start full-time after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Axon's mission to Protect Life through reliable, self-service infrastructure tooling.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help engineering teams at Axon provision infrastructure rapidly, consistently, and securely.
Regards,
