Dear Hiring Committee,

I saw the job post on **Cisco's careers site** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **AI Software Engineer II** at **Cisco**. With production experience securing infrastructure, enforcing secure development practices, and building AI/LLM systems, I am excited about the opportunity to contribute to Cisco's Security & Trust Organization and support the secure adoption of AI across testing platforms and pipelines.

Here are reasons that make me a great fit for the role:

- **Security engineering and secure SDLC foundation:** At Siemens Industry Software, I managed HashiCorp Vault secrets and IAM access policies across 40+ production and non-production cloud environments, and served as Quality Coach and SonarQube Specialist, enforcing secure coding standards and CI/CD quality gates that raised automated code coverage from 35% to 78%.

- **Python automation and tooling experience:** I automated Teamcenter X infrastructure workflows with Python and Boto3, replacing legacy scripts and cutting deployment time by 40% across AWS environments, and built a Go and Terratest validation framework that caught 95% of misconfigurations before they reached production.

- **Hands on AI/ML engineering with adversarial evaluation:** As a graduate researcher, I designed a two stage memory augmented LLM pipeline for Android GUI bug reproduction and evaluated it against a published GPT-4o based baseline across 53 runs on 20+ apps, achieving a 25.7x latency reduction while preserving task completion fidelity through a provider agnostic model abstraction.

- **LLM security and agentic system design:** For PolicyPilot, I architected an evidence grounded RAG pipeline over Google Gemini that forces citation backed answers to eliminate hallucinated output in high stakes healthcare decisions, and designed a 17 tool MCP server with schema validation at every boundary to prevent malformed or injected tool inputs from external AI agents.

- **CI/CD and collaborative engineering culture:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and mentored 5 engineers on secure development practices, reflecting the cross team collaboration this role requires with engineering, product, and security stakeholders.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Cisco's mission of securing AI enabled systems and cultivating trust with customers and partners.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help advance the secure and responsible adoption of AI across Cisco's platforms.
Regards,
