Dear Hiring Committee,

I saw the job post on the **Impiricus careers page** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer (DevOps)** at **Impiricus**. With hands on experience building AWS infrastructure, CI/CD pipelines, and Kubernetes deployment platforms at Siemens Industry Software, I am excited about the opportunity to contribute to **Impiricus** and support the reliability, security, and scalability of the platform that powers your HCP engagement engine.

Here are reasons that make me a great fit for the role:

- **AWS infrastructure and automation:** At Siemens, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments including EC2, S3, and IAM-managed access.

- **CI/CD pipelines and containerized workloads:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible based Blue-Green deployment framework that reduced production upgrade downtime by 50% with automated rollback.

- **Infrastructure as Code and security:** I provisioned AWS resources with Terraform, reducing deployment time by 30%, and built a Go + Terratest validation framework catching 95% of misconfigurations pre-production. I also managed HashiCorp Vault secrets and IAM access policies across production and non-production environments.

- **Observability, incident response, and QA:** I diagnosed live production issues across Linux, EC2, and databases using CloudWatch metrics and Datadog log correlation during 44 production environment upgrades in 4 months. As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% and mentored 5 engineers.

- **Cost optimization:** I reduced monthly AWS spend by 40% ($15K to $9K) through EC2 rightsizing and automated cleanup of unused cloud resources.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Impiricus's mission of ethically connecting HCPs to the resources they need.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the reliable, secure cloud infrastructure behind Impiricus's AI-powered HCP engagement platform.
