Dear Hiring Committee,

I saw the job post on **Handshake** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Fullstack Software Engineer Intern** at **Narratize**. With hands on experience across full-stack JavaScript applications, automated testing, and AWS/Docker infrastructure, I am excited about the opportunity to contribute to Narratize's engineering team and support your AI-powered platform.

Here are reasons that make me a great fit for the role:

- **Testing across JavaScript/React and identifying edge cases:** I built full-stack React and TypeScript applications with Vitest unit and integration test coverage and axe-core accessibility checks, and designed Zod schema validation at every data boundary to catch a class of runtime type-mismatch bugs before they reached production.

- **Bug reproduction, triage, and documentation:** At Siemens, I diagnosed and resolved live infrastructure issues across 44 production environment upgrades in 4 months, working directly with logs and system state to isolate root causes and document findings for the team.

- **Reviewing fixes and maintaining automated test coverage:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and reviewed engineering work to confirm fixes fully resolved issues without regressions.

- **Agile process and collaborative development:** I participated in sprint planning and standups as part of the Agile Release Train while mentoring 5 software engineers through structured onboarding, and contributed to a Go and Terratest framework that caught 95% of misconfigurations pre-production.

- **AWS and containerized development:** I migrated 40+ production environments to Kubernetes using Docker-based deployments, ArgoCD, Helm, and GitLab CI/CD, and automated AWS resource provisioning with Terraform to reduce deployment time by 30%.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Narratize.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help Narratize build reliable, well-tested software that turns product teams' data into real insight.
Regards,
