Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer II** at **ODW Logistics**. With hands on experience designing REST APIs, working across backend, frontend, and database layers, and mentoring engineers on implementation approaches, I am excited about the opportunity to contribute to **ODW Logistics** and support the **Transportation Management System** platform.

Here are reasons that make me a great fit for the role:

- **Designing and coding features across backend, frontend, and database layers:** At Siemens Industry Software, I built REST API automation with Python and Boto3 that replaced legacy Ruby scripts, cutting deployment time by 40% across AWS environments, and worked hands on with SQL-backed infrastructure services in production.

- **Providing direction to junior engineers:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards, and mentored 5 software engineers through structured onboarding and implementation guidance, closely mirroring the mentorship expected of this role.

- **Designing and developing RESTful APIs:** In my PolicyPilot project, I designed 17 REST and MCP tool APIs using Express 5 with Zod schema validation at every data boundary, following repository-pattern data access to eliminate a class of runtime type-mismatch bugs across external calls.

- **Contributing to CI/CD pipelines and containerized environments:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible-based Blue-Green deployment framework that reduced production upgrade downtime by 50%, giving me direct experience with containerized deployment across multiple environments.

- **Full-stack development with modern frameworks:** I have hands on experience with Java, Python, JavaScript, TypeScript, Go, SQL, React, Node.js, and Docker, building backend services, REST APIs, and full-stack, production-grade applications.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **ODW Logistics** and supporting the engineering team behind its TMS platform.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help power the freight operations technology that keeps ODW's supply chain solutions running smoothly.
