Dear Hiring Committee,

I saw the job post on **Siemens Careers** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Test Professional** at **Siemens Industry, Inc.**. With hands on experience in object-oriented software design, automated testing, and production quality engineering at Siemens, I am excited about the opportunity to contribute to **Siemens Industry, Inc.** and support the Digital Industries team building robust software and firmware for the industrial automation product portfolio.

Here are reasons that make me a great fit for the role:

- **Programming and object-oriented design:** I have hands on experience in C/C++, Java, Python, and Go, and I have applied object-oriented design principles to build production automation tools at Siemens, including a Python (Boto3) system that replaced legacy scripts and cut deployment time by 40 percent.

- **Testing complex runtime environments:** As Quality Coach and SonarQube Specialist at Siemens Industry Software, I wrote automated tests and enforced CI/CD quality gates that raised automated code coverage from 35 percent to 78 percent across a live production environment fleet running on Linux and AWS.

- **Building automated tests and frameworks:** I developed a Go and Terratest automated test framework that caught 95 percent of infrastructure misconfigurations before they reached production, and I designed an Ansible based Blue-Green deployment test and rollback framework that verified 44 production environment upgrades in four months with zero unresolved defects.

- **Attention to detail and teamwork:** I mentored 5 software engineers on testing standards and structured onboarding, and I regularly collaborated with cross-functional and international stakeholders while migrating 40 plus production environments to Kubernetes, strengthening my communication and self-motivated problem-solving skills.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Siemens Industry, Inc.** and helping deliver reliable, well tested automation solutions to customers.

Please find my CV attached below. I look forward to hearing from you. I would be excited to bring my testing and quality engineering background back into the Siemens family in a role focused on strengthening industrial automation products.
