Dear Hiring Manager,

I am excited to apply for the Site Reliability Engineer Intern position at IBM. As a computer science master's student graduating in Dec 2026, I am eager to contribute my skills and experience to a leading technology company like IBM. With a strong foundation in software development and a passion for reliability engineering, I believe I would be an excellent fit for this role.

As highlighted in my resume, I have relevant experience in software development, with internships at Siemens Industry Software and the Government of Maharashtra's Water Resource Department. In these roles, I developed skills in automation, deployment, and infrastructure validation using tools like Terraform, Ansible, and Kubernetes. My most notable achievement was developing a reusable Python package for patching, which boosted deployment effectiveness by 40%. I am confident that my experience with containerization (Docker, Kubernetes), CI/CD tools (Jenkins, GitHub Actions), and monitoring tools (Prometheus, Grafana) will be valuable assets to the IBM team. Additionally, my strong problem-solving skills and eagerness to learn will enable me to quickly adapt to the company's systems and processes.

I am particularly drawn to this role at IBM because of the opportunity to work on the systems driving the quantum revolution and the AI era. I am impressed by IBM's commitment to innovation and its efforts to push the boundaries of technology. As a Site Reliability Engineer Intern, I look forward to collaborating with development and operations teams to design, implement, and maintain infrastructure that supports mission-critical applications. I am excited about the prospect of contributing to IBM's leading-edge technology portfolio and learning from experienced professionals in the field.

Thank you for considering my application. I am available to start immediately after graduation in Dec 2026 and look forward to discussing this opportunity further.

Sincerely, Tanmay Bhuskute
