Dear Hiring Committee,

I saw the job post on NetJets' Company Careers page and thought I'd be a good fit for it. I am a Master's student at the University of Cincinnati seeking a Software Engineer (Site Reliability) role at NetJets, and a new graduate with 2+ years of production software engineering experience. My background automating deployment pipelines and diagnosing live production infrastructure aligns closely with this SRE role's focus on reliability and toil reduction.

Here are reasons that make me a great fit for the role:

1. This role calls for reliable, scalable software delivery, and at Siemens Industry Software I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure issues across Linux, EC2, and databases without extended outages.

2. The job emphasizes automated CI/CD pipelines, and I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, building the repeatable build, test, and deployment processes this role asks for.

3. Embedding quality into the software lifecycle is a core responsibility here, and I served as Quality Coach and SonarQube Specialist for our Agile Release Train, raising automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates. My Siemens experience also built documentation first communication habits while mentoring 5 engineers through onboarding.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism, growth, and reliable engineering practices, I am enthusiastic about contributing to NetJets in this role.

Please find my CV attached below. I look forward to hearing from you. Supporting the systems behind the leader in private aviation is exactly the kind of high ownership engineering work I want to do next.
