Dear Hiring Committee,

I saw the job post on the careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, Infrastructure** at **CLEAR**.

Here are reasons that make me a great fit for the role:

- **AWS networking and infrastructure automation:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python and Boto3 on AWS, replacing legacy scripts and reducing deployment time by 40%. I also built Infrastructure as Code automation with Terraform and Ansible, standardizing provisioning across 40+ production environments, and as a Software Developer Intern I automated AWS resource provisioning with Terraform, cutting deployment time by 30%.

- **Kubernetes and compute platform experience:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD and Helm, improving service communication and management across the environment fleet.

- **Reliability and monitoring mindset:** I executed 44 production environment upgrades in 4 months, diagnosing live AWS and EC2 infrastructure issues using CloudWatch metrics and Datadog log correlation, work that sharpened my focus on reliability and simplicity in production systems.

- **Product minded engineering and quality ownership:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and built a Go and Terratest framework that caught 95% of misconfigurations before production, reflecting the continuous improvement mindset the role calls for.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to CLEAR's Infrastructure team and helping build the next generation of secure, scalable systems.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the infrastructure that keeps CLEAR's identity platform fast, secure, and reliable for millions of members.
Regards,
