Dear Hiring Committee,

I saw the job post on the SAS careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Engineer in Test (Emerging Careers)** at **SAS**. With hands on experience writing Python automation, working inside Kubernetes environments, and maintaining CI/CD pipelines in production, I am excited about the opportunity to contribute to **SAS** and the Cloud Data Exchange team's mission of delivering secure, reliable data access at scale.

Here are reasons that make me a great fit for the role:

- **Python and Unix shell scripting:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows using Python and Unix shell scripts, replacing legacy Ruby scripts and cutting deployment time by 40 percent across AWS environments.

- **Kubernetes environments and CLIs:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, working directly with Kubernetes CLIs and architecture on a daily basis.

- **Quality engineering and test automation:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I increased automated code coverage from 35 percent to 78 percent by enforcing coding standards and CI/CD quality gates. As an intern, I also built a Go and Terratest automated testing framework that caught 95 percent of misconfigurations before production.

- **Git, CI/CD, and cloud platforms:** I have hands on experience with Git branching, code review, and merging across GitLab CI/CD and Jenkins pipelines, along with AWS, and exposure to Azure and Google Cloud Platform, REST APIs, and relational databases including PostgreSQL and MySQL.

- **Production triage and collaboration:** I executed 44 production environment upgrades in four months at Siemens, triaging and resolving live infrastructure issues across Linux, EC2, and databases while working closely with cross functional engineering teams.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **SAS** and helping the Cloud Data Exchange team ship high quality, well tested software.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the test automation behind data infrastructure that SAS customers around the world rely on every day.
