Dear Hiring Committee,

I saw the job post on **the Maximor careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer (New Grad)** at **Maximor**. I have spent the last year building AI agents that people must trust with high-stakes decisions, plus two years of production engineering at Siemens, and Maximor's goal of Audit-Ready AI Agents for the CFO office is exactly the problem I want to work on.

Here are reasons that make me a great fit for the role:

- **Building AI agents finance teams and auditors can trust:** For PolicyPilot, I architected an evidence-grounded RAG pipeline over Gemini 2.5-flash that forces every answer to cite its source and version, so a retrieval mismatch surfaces to the reviewer instead of quietly misleading them on an eligibility decision, paired with a confidence-scoring system that escalates uncertain cases to human review rather than guessing.

- **Context engineering over messy records without bloat or drift:** My graduate research is a two-stage memory-augmented LLM agent that extracts structured context in a single pass, then conditions automation on that memory instead of re-reading raw input every step. Against the ViBR baseline across 53 runs on 20+ apps it shows a 25.7x latency reduction with task fidelity preserved.

- **Turning scattered systems into one source of truth, with safe writes:** I built a 4-stage Python ETL pipeline that ingests, normalizes, and reconciles 71K+ events from several external APIs into one PostgreSQL source of truth. At Siemens I designed an Ansible Blue-Green framework with idempotent, audit-ready rollback that recovers any environment in 15 minutes, and ran 44 production upgrades in 4 months.

- **Shipping full-stack and operating coding agents:** I built PolicyPilot end to end in TypeScript, a React SPA plus an Express API plus a 17-tool MCP server on one Node.js process, with Zod validation at every data boundary. I use Claude Code and Cursor daily to ship faster, and I have real craft in the agents themselves: prompts, context, tool use, and evals.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Maximor** and helping build agents that finance teams and auditors can actually rely on.

Please find my CV attached below. I look forward to hearing from you. Sitting with controllers and CFOs to understand the work before building the system that replaces it is exactly how I like to engineer, and I would be glad to do that from day one.

Regards,
