Dear Hiring Committee,

I saw the job post on the **careers website** and thought I'd be a good fit for it. I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Intern** at the **Detroit Pistons**. With hands on experience building and maintaining internal full-stack web applications, working with databases and data pipelines, and shipping features from stakeholder requirements, I am excited about the opportunity to help build the tools that support Basketball Operations decision-making.

Here are reasons that make me a great fit for the role:

- **Building internal web applications:** At the Government of Maharashtra Water Resource Department, I built and deployed a full-stack React and MySQL internal workflow application that digitized departmental record management and improved operational efficiency by 40%, serving staff across the department.

- **Collaborating with stakeholders to gather requirements:** At Siemens Industry Software, I worked with 15+ engineers across teams to gather requirements and ship a self-service dashboard and CLI for environment lifecycle management, which was adopted across the organization.

- **Writing clean, maintainable code in JavaScript, SQL, and OOP languages:** I work in JavaScript, TypeScript, Java, Python, and SQL, and have built full-stack apps with React, Node.js, and Express. As Quality Coach and SonarQube Specialist at Siemens, I raised automated test coverage from 35% to 78% by enforcing coding standards.

- **Working with databases and data pipelines:** On my Spotify Analytics platform I designed a PostgreSQL schema with materialized views, indexes, and 16 SQL functions, fed by a 4-stage Python ETL pipeline processing 71K+ events, and I have built Spark-based medallion data pipelines on other projects.

- **Debugging, testing, and deploying updates:** At Siemens I executed 44 production environment upgrades in 4 months, diagnosing and resolving live issues across Linux, databases, and backend services, and I write unit and integration tests with Vitest, Jest, and Pytest.

I am available for full-time after December 2026, when I graduate. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to the Detroit Pistons and the technology behind Basketball Operations.

Please find my CV attached below. I look forward to hearing from you. Building tools that directly inform coaching, scouting, and player personnel decisions sounds like a great place to learn and contribute.
