Dear Hiring Committee,

I saw the job post on the careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer - New Grad** at **Scale AI**. With hands on experience shipping full stack web applications, integrating APIs, and building systems that process large volumes of data, I am excited about the opportunity to contribute to **Scale AI** and help move AI applications from pilot to production impact.

Here are reasons that make me a great fit for the role:

- **Product engineering and shipping customer-facing features:** I built and shipped PolicyPilot, a full stack TypeScript app (React SPA, Express REST API, and an MCP server) for high stakes eligibility decisions, and earlier a full stack React and MySQL workflow application for the Government of Maharashtra that digitized record management and improved operational efficiency by 40%.

- **Prior software engineering internships and shipping at scale:** Across two internships and a full time role at Siemens Industry Software, I executed 44 production environment upgrades in 4 months, replaced legacy Ruby workflows with Python automation that cut deployment time by 40%, and built a self service developer platform adopted by 15 engineers.

- **Building systems that process large volumes of data:** I built an ML system forecasting demand across 263 zones over a 2.3M row hourly dataset using a PySpark medallion pipeline, improving weighted MAPE from 18.77% to 16.52% and cutting RMSE by 43%, then served predictions through a FastAPI backend with PostgreSQL and Redis caching.

- **Python, TypeScript, React, and hands-on LLM work:** I work daily in Python, TypeScript, React, Node.js, and SQL. My graduate research builds and evaluates agentic LLM pipelines against a published baseline (ViBR) across 53 runs on 20+ apps, achieving a 25.7x latency reduction while preserving task completion fidelity.

I am available for full-time work after December 2026, my graduation date. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Scale AI** and the engineering behind reliable AI systems.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the products and infrastructure that take AI applications from pilot to real world impact.
