Dear Hiring Committee,

I saw the job post on the careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Forward Deployed Engineer, New Grad 2027** at **C3 AI**. With hands on experience building backend automation, full stack applications, and customer facing production systems, I am excited about the opportunity to contribute to **C3 AI** and support customer facing deployments on the C3 Agentic AI Platform.

Here are reasons that make me a great fit for the role:

- **Designing and maintaining performant, scalable applications:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments, and migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD.

- **Debugging, troubleshooting, and testing customer facing systems:** I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure issues across Linux, EC2, databases, and Teamcenter X services, and as Quality Coach and SonarQube Specialist increased automated code coverage from 35% to 78%.

- **Programming in Python, Java, and JavaScript with hands on data and cloud experience:** I work daily with Python, Java, JavaScript, TypeScript, SQL, and Go, and have built REST APIs, relational database schemas, and cloud deployments on AWS, Docker, and Kubernetes across my professional and project work.

- **Familiarity with agentic AI architectures and LLM tool calling:** My current graduate research designs a memory-augmented LLM pipeline for Android bug reproduction using Google Gemini 2.5 Pro and Vertex AI, achieving a 25.7x latency reduction over a published baseline. On PolicyPilot, I built a 17-tool MCP server exposing structured LLM tool-calling for healthcare eligibility workflows, consumable by external AI agents.

- **Working with React and modern frontend frameworks:** I built PolicyPilot's React and TypeScript frontend and the NYC Mobility Forecasting dashboard in React, giving me practical experience pairing frontend work with backend and API design, useful for full stack customer engagements.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to C3 AI's customer facing engineering team and helping deploy enterprise AI applications at scale.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help bring the C3 Agentic AI Platform to life for customers through hands on, high autonomy engineering work.
