Dear Hiring Committee,

I saw the job post on **Justworks' careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **Justworks**. With hands on experience building backend automation, full stack applications, cloud platforms, and reliable deployment systems, I am excited about the opportunity to contribute to **Justworks** and support the team building high volume, fault tolerant infrastructure that keeps sensitive HR and payroll data secure.

Here are reasons that make me a great fit for the role:

- **Server side languages and SQL:** I have production experience writing Python and Java, and building REST APIs with Node.js and FastAPI. At Siemens, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40 percent, and I regularly work with PostgreSQL and MySQL for backend data storage.

- **Cloud platforms and AWS:** I have hands on AWS deployment and monitoring experience. I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure issues across Linux, EC2, and database services, and reduced AWS deployment time by 40 percent through Python automation.

- **Building and maintaining large scale systems:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and designed an Ansible based Blue Green deployment framework that reduced production upgrade downtime by 50 percent while enabling reliable rollback.

- **Mentorship and knowledge sharing:** As Quality Coach and SonarQube Specialist, I increased automated test coverage from 35 percent to 78 percent by improving CI/CD quality gates, and mentored 5 software engineers through structured onboarding, which strengthened my interest in helping junior developers grow.

- **Collaboration with cross functional teams:** Through my graduate research and project work, including a healthcare portal built with React, Node.js, and Gemini, I have collaborated closely with teammates across design and product to ship features end to end.

I am available for full-time work after December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Justworks.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the reliable, secure infrastructure that lets small businesses focus on running their business.
