Dear Hiring Committee,

I saw the job post on **the Citizens careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer 1** at **Citizens**. With hands on experience building LLM applications, RAG pipelines, backend services, and cloud automation, I am excited about the opportunity to contribute to **Citizens** and support **its Agentic AI solutions**.

Here are reasons that make me a great fit for the role:

- **AI agents with LLMs and workflow tools:** I benchmarked Spendora's Gemini powered financial assistant on 100 analytical queries, reaching 94% numerical correctness and 90% tool selection accuracy. In PolicyPilot, I designed a 17 tool MCP server that lets external AI agents run prior authorization extraction and cross payer comparison. My graduate research on LLM driven Android automation achieved a 25.7x latency reduction over a published baseline.

- **APIs, backend services, and Python:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments. I also built a REST API for PolicyPilot with Zod validation at every data boundary, and at Siemens I wrote Go and Terratest integration tests that caught about 95% of historical misconfiguration scenarios before deployment.

- **CI/CD, cloud, and troubleshooting:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, executed 44 production upgrades in 4 months, and designed an Ansible based Blue-Green framework that cut upgrade downtime by 50%.

- **Well tested code and collaboration:** As Quality Coach and SonarQube Specialist, I raised automated code coverage from 35% to 78% and mentored 5 software engineers. In Spendora, I backed the app with 80 automated tests across unit, database, and end to end layers.

- **Security and responsible AI:** PolicyPilot forces citation backed answers and uses confidence scoring to route uncertain results to human review. In Spendora, I used Supabase authentication, row level security, and AI usage quotas, and at Siemens I managed HashiCorp Vault secrets.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Citizens** and **building reliable AI powered applications that improve customer experience**.

Please find my CV attached below. I look forward to hearing from you. **I would be excited to learn from experienced engineers and AI specialists at Citizens while helping deliver AI solutions that serve its customers**.

Regards,
