Dear Hiring Committee,

I saw the job post on **DoorDash's careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer I (Entry Level)** at **DoorDash**. With hands on experience building backend automation, full stack applications, cloud platforms, and reliable deployment systems, I am excited about the opportunity to contribute to **DoorDash** and support **reliable, scalable technology for consumers, merchants, and delivery partners**.

Here are reasons that make me a great fit for the role:

- **Internships and production experience with object oriented languages:** Across two internships and two years as a Software Development Engineer at Siemens Industry Software, I automated Teamcenter X workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments.

- **Databases and SQL:** I built a full stack React and MySQL application for the Government of Maharashtra that cut document retrieval time by 90% (5 minutes to 30 seconds), and architected a PostgreSQL ledger in my Spendora project with cent level reconciliation across 18 months of data.

- **Clean code, version control, and unit tests:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers. In Spendora, I shipped 80 automated tests across unit, database, and end to end layers.

- **Stability, scalability, and live deployments:** I migrated 40+ production environments to Kubernetes, executed 44 production upgrades in 4 months using CloudWatch and Datadog monitoring, and designed an Ansible based Blue-Green framework that reduced upgrade downtime by 50%.

- **Responsible use of AI tools:** I benchmarked a Gemini powered assistant on 100 queries, reaching 94% numerical correctness, and my research cut Android bug reproduction latency by 25.7x against a published baseline.

I am excited to apply for the **Software Engineer I role for the Fall 2026 to Summer 2027 graduating class**, and I am available for full time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **DoorDash** and **shipping and operating production software with my mentor and team**.

Please find my CV attached below. I look forward to hearing from you. **I admire DoorDash's mission to empower local economies and the mentorship it offers new engineers**.
