Dear Hiring Committee,

I saw the job post on **Akamai's careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Engineer in Test II (Kubernetes)** at **Akamai**. With hands on experience building backend automation, test frameworks, cloud platforms, and reliable deployment systems, I am excited about the opportunity to contribute to **Akamai's Compute team** and support the **Golden Path cloud-native platform**.

Here are reasons that make me a great fit for the role:

- **Test automation with Python:** I work in Python every day and have Pytest in my toolkit. At Siemens Industry Software, I automated Teamcenter X workflows with Python (Boto3), cutting deployment time by 40% across AWS environments, and as an intern I built a Go and Terratest framework that caught 95% of misconfigurations before production.

- **Operating and testing production services on Kubernetes:** I migrated 40+ production environments from process based deployments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault, and executed 44 production environment upgrades in 4 months, diagnosing live issues across Linux, EC2, and databases.

- **Linux, networking, and security fundamentals:** My Terratest suites validated service connectivity and network security configurations, and I managed HashiCorp Vault secrets and IAM access policies across production and non production environments. I also designed an Ansible based Blue-Green deployment framework that reduced upgrade downtime by 50% with reliable rollback.

- **CI/CD, quality, and collaboration in Agile teams:** As Quality Coach and SonarQube Specialist for the Agile Release Train, I raised automated code coverage from 35% to 78% by enforcing CI/CD quality gates, and mentored 5 software engineers. I also maintained GitOps pipelines with GitLab CI/CD and ArgoCD, so troubleshooting pipeline failures is familiar ground.

I am available for full time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Akamai** and helping validate the cloud-native architectures behind the **Golden Path platform**.

Please find my CV attached below. I look forward to hearing from you. **I would be glad to help Akamai's Compute team bring new products to market faster with reliable, well tested infrastructure**.

Regards,
