Dear Hiring Committee,

I saw the job post on **Jobright** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer 1, Cloud Infrastructure** at **Abnormal AI**. With two years of production cloud infrastructure experience at Siemens Industry Software, I am excited about the opportunity to contribute to **Abnormal AI** and support the **Platform and Infrastructure team**.

Here are reasons that make me a great fit for the role:

- **Infrastructure as code for reliable cloud systems:** At Siemens, I built Terraform and Ansible automation that standardized provisioning across 40+ production environments. As an intern, I cut deployment time by 30% with reusable Terraform modules on AWS and built a Go and Terratest suite that caught 95% of misconfigurations before production.

- **Python, AWS, and Kubernetes in production:** I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40%. I also migrated 40+ production environments to Kubernetes using ArgoCD, Helm, GitLab CI/CD, and HashiCorp Vault.

- **Production reliability, cost, and less operational toil:** I executed 44 production environment upgrades in 4 months, diagnosing live issues with CloudWatch and Datadog. I designed a Blue-Green deployment framework that cut upgrade downtime by 50%, reduced monthly AWS spend by 40% ($15K to $9K), and built a self service platform adopted by 15 engineers that cut environment management time by up to 90%.

- **Mature engineering practices and teamwork:** As Quality Coach and SonarQube Specialist, I raised automated code coverage from 35% to 78% and mentored 5 engineers through onboarding and standardized practices.

- **Judgment when building with AI:** In my PolicyPilot project, I built a Gemini based RAG pipeline with citation backed answers to limit hallucination. In my research, my LLM pipeline achieved 25.7x lower latency than the ViBR baseline.

I am available for full time roles after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Abnormal AI** and helping build secure, cost efficient infrastructure for the **Platform and Infrastructure team**.

Please find my CV attached below. I look forward to hearing from you. **I would be excited to help build the platform behind Abnormal AI's security products**.
