Dear Hiring Committee,

I saw the job post on the **Salesforce careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineering AMTS (College Grad)** at **Salesforce**. With over two years of production software engineering experience at Siemens Industry Software, I have built backend automation, full stack applications, and cloud platforms. I am excited about the opportunity to contribute to **Salesforce** and help build scalable, trusted cloud products for customers.

Here are reasons that make me a great fit for the role:

- **Building scalable products:** At Siemens, I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, executed 44 production environment upgrades in 4 months, and designed an Ansible based Blue-Green deployment framework that reduced upgrade downtime by 50%.

- **Test strategy and automation:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78%, and I developed a Go and Terratest framework that caught 95% of misconfigurations before production. In my Spendora project, I wrote 80 tests across unit, database, and end to end layers.

- **Professional coding in Python, JavaScript, SQL, and Java:** I automated Teamcenter X workflows with Python and Boto3, cutting deployment time by 40%, and built a React and MySQL application that cut document retrieval time by 90%. My Computer Engineering degree included object oriented programming coursework.

- **Working thoughtfully with LLMs and agentic tools:** In my graduate research, I built a memory augmented LLM pipeline with Gemini that achieved a 25.7x latency reduction over the ViBR baseline. In PolicyPilot, I designed a 17 tool MCP server for external AI agents and benchmarked hallucination rates before choosing Gemini.

- **Metrics and collaboration:** I used CloudWatch utilization metrics to help cut monthly AWS spend by 40% ($15K to $9K), and I mentored 5 software engineers through structured onboarding.

I am available for full time work after my graduation in **December 2026**, which falls within the Q4 and Q1 start window for this role. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Salesforce** and its software engineering teams.

Please find my CV attached below. I look forward to hearing from you. **Salesforce's vision of humans and AI agents driving customer success together is an exciting direction, and I would love to be part of it**.

Regards,
