Dear Hiring Committee,

I saw the job post on **LinkedIn** and thought I'd be a good fit for it.

I am a graduate from the University of Cincinnati, looking for a role as a **Software Engineer** at **Akamai Technologies**. With hands on experience designing and maintaining infrastructure for data and ML pipelines, CI/CD systems, and cloud platforms, I am excited about the opportunity to contribute to Akamai and support the teams building infrastructure for machine learning and data workloads across the world's most distributed platform.

Here are reasons that make me a great fit for the role:

- **Designing and maintaining infrastructure for ML pipelines and CI/CD:** At Siemens Industry Software, I designed and maintained GitOps CI/CD infrastructure with GitLab CI/CD and ArgoCD, enabling automated, auditable, rollback capable deployments across 40+ production environments on AWS. I also automated infrastructure workflows in Python with Boto3, replacing legacy scripts and cutting deployment time by 40%.

- **Analyzing and interpreting data to ensure infrastructure performance:** I analyzed live infrastructure performance across Linux, EC2, and databases using CloudWatch and Datadog log correlation, executing 44 production environment upgrades in 4 months while diagnosing and resolving issues without service interruption, and reduced monthly AWS spend by 40% through utilization analysis and rightsizing.

- **Apache Spark, big data, Python, and SQL:** I built an ML pipeline forecasting NYC taxi demand across 263 zones using Python, PySpark, Apache Spark, and Delta Lake, processing trip and weather data through a medallion pipeline into a 2.3M row hourly dataset, and served predictions through a FastAPI REST service backed by PostgreSQL and Redis.

- **Data and model governance, clean and maintainable code:** On PolicyPilot I built a PDF to structured data pipeline with schema validation at every boundary and added citation and version tracing so stale data mismatches surface immediately. As a Quality Coach and SonarQube Specialist at Siemens, I raised automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 engineers.

I am available for full time work after December 2026, when I graduate. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Akamai and helping build and operate the infrastructure behind its ML and data platforms.

Please find my CV attached below. I look forward to hearing from you. I would be glad to contribute to a team that powers and protects a meaningful share of the internet every day.
