Dear Hiring Committee,

I saw the job post on **Avid Technology Professionals' careers website** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer 2** at **Avid Technology Professionals**. With hands on experience implementing containerized application workflows and infrastructure automation using modern DevOps and cloud native tooling, I am excited about the opportunity to contribute to **Avid Technology Professionals** and support your infrastructure automation initiatives.

Here are reasons that make me a great fit for the role:

- **Comfortable coding in Go, Python, and TypeScript:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy Ruby scripts and cutting deployment time by 40% across AWS environments. I also developed a Go and Terratest framework that caught 95% of misconfigurations before production.

- **Familiar with GitOps workflows and CI/CD tools like ArgoCD:** I migrated 40+ production environments from process based deployments to Kubernetes using GitOps workflows with ArgoCD, Helm, and GitLab CI/CD, modernizing container orchestration across the environment fleet.

- **Experience with Kubernetes manifests, Helm, and Docker:** Beyond the Siemens Kubernetes migration, I containerized a full stack TypeScript healthcare application (React, Express, MCP server) with Docker and built a containerized FastAPI service integrated with PostgreSQL and Redis for real time predictions.

- **Understands infrastructure as code and Linux system operations:** I built infrastructure as code automation using Terraform and Ansible for environment provisioning, and executed 44 production environment upgrades in 4 months, debugging live infrastructure issues across Linux, EC2, and Docker based services.

- **Can debug and troubleshoot in a containerized environment:** As Quality Coach and SonarQube Specialist, I increased automated code coverage from 35% to 78% by enforcing coding standards and CI/CD quality gates, and mentored 5 software engineers through structured onboarding.

I am available for full time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Avid Technology Professionals**.

Please find my CV attached below. I look forward to hearing from you. I would be excited to bring my infrastructure automation and container orchestration experience to your engineering team.
