Dear Hiring Committee,

I saw the job post on the careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer** at **Caesars Digital**. With hands on experience building backend automation, distributed cloud infrastructure, and reliable deployment systems, I am excited about the opportunity to contribute to **Caesars Digital** and support the ZeroFlucs sports betting platform's pricing and trading technology.

Here are reasons that make me a great fit for the role:

- **Computer science, programming, and software development skills:** I hold hands on experience with Go, Python, Java, and SQL, having built backend automation frameworks, REST APIs, and ML pipelines across production systems and research projects, giving me a strong foundation across the full software development lifecycle.

- **Back end development and object oriented programming:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python (Boto3), replacing legacy scripts and cutting deployment time by 40 percent across AWS environments, and I migrated 40 plus production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, building strong object oriented and distributed systems fundamentals along the way.

- **Working effectively in a team environment:** As Quality Coach and SonarQube Specialist on an Agile Release Train, I increased automated code coverage from 35 percent to 78 percent and mentored 5 software engineers through structured onboarding, collaborating daily with cross functional engineers to raise team wide standards.

- **Excellent problem solving skills:** I executed 44 production environment upgrades in 4 months, diagnosing and resolving live infrastructure issues across Linux, EC2, and databases, and I designed an Ansible based Blue Green deployment framework that cut production upgrade downtime by 50 percent through reliable rollback automation.

- **Cloud infrastructure and an interest in sports:** My work spans AWS, Google Cloud Platform, and Kubernetes based infrastructure, and as someone who follows sports closely, I am genuinely excited about applying engineering rigor to sports betting pricing and trading systems.

I am available for full time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Caesars Digital**.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help Caesars Digital blaze the trail in sports betting technology.
