Dear Hiring Committee,

I saw the job post on the careers website and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, Backend New Graduate** at **Prophet Security**. With hands on backend engineering experience in Python and Go, building distributed systems, automation frameworks, and production deployment pipelines, I am excited about the opportunity to contribute to **Prophet Security** and help build the backend systems that power automated security investigations.

Here are reasons that make me a great fit for the role:

- **Backend development in Python and Go:** At Siemens Industry Software, I built backend automation in Python (Boto3) that replaced legacy scripts and cut deployment time by 40% across AWS environments. I also built a Go and Terratest testing framework that caught 95% of misconfigurations before they reached production.

- **Data structures, algorithms, testing, and system design:** My graduate coursework in Advanced Algorithms and Database Theory, combined with hands on experience designing systems at Siemens, gave me a strong foundation in system design and automated testing, reflected in raising automated test coverage from 35% to 78% as Quality Coach.

- **Building software through internships, research, and personal projects:** Beyond Siemens, I have built production ready systems independently, including a backend ML pipeline processing a 2.3 million row dataset with a FastAPI service and PostgreSQL and Redis backing store, and a 17 tool MCP server exposing structured tool calling APIs for automated document analysis.

- **Working across distributed systems and cloud infrastructure:** I migrated 40+ production environments to Kubernetes using ArgoCD, Helm, and GitLab CI/CD, and diagnosed live infrastructure issues across 44 production environments in 4 months, giving me direct experience operating distributed backend services at scale.

- **Collaboration and ownership in a fast moving environment:** I mentored 5 software engineers through structured onboarding while serving as Quality Coach on an Agile Release Train, and my current graduate research applies LLM powered agents to automate analysis workflows, closely mirroring the AI powered investigation work Prophet's platform performs.

I am available for full time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Prophet Security's mission of automating security operations.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help build the backend systems that let security teams investigate threats faster and more effectively.
