Dear Hiring Committee,

I saw the job post on the **Siemens careers website** and thought I'd be a good fit for it.

I am a graduate student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Development Engineer Advanced** at **Siemens Industry Software**. Having already spent over two years as a Software Development Engineer at Siemens Industry Software, I know the Teamcenter X cloud platform well and I am excited to return and build on that work.

Here are reasons that make me a great fit for the role:

- **Frontend web development with JavaScript and TypeScript:** I have built React and TypeScript frontends across several projects, including a React 19 dashboard on Vite with Material UI, Zustand, and React Router for a personal analytics platform, and a React single-page app for a healthcare policy portal.

- **Server-side applications and APIs with Node.js:** For the policy portal I built an Express REST API running on a single Node.js process, with Zod schema validation at every data boundary and Vitest unit and integration tests covering the request paths.

- **Designing and deploying on AWS with Docker:** At Siemens Industry Software I designed and deployed cloud applications on AWS using EC2, S3, Lambda, SQS, EKS, and EFS with Docker, automating Teamcenter X workflows in Python and Boto3 and cutting deployment time by 40%. I also migrated 40+ production environments to Kubernetes on EKS using ArgoCD, Helm, and GitLab CI/CD.

- **Building and maintaining data stores:** I have worked with AWS RDS and MySQL, tracked fleet-wide environment state and job status for 40+ production environments in DynamoDB, and designed a PostgreSQL analytics schema with materialized views and 16 SQL RPC functions.

- **Monitoring, unit tests, and code reviews:** I built monitoring and alerting for frontend and server-side services using Datadog and CloudWatch while diagnosing 44 live production upgrades in 4 months, and as Quality Coach and SonarQube Specialist I ran code reviews and raised automated test coverage from 35% to 78%.

I am available for full-time work after December 2026, in line with my graduation date. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to Siemens Industry Software and helping deliver reliable cloud-based solutions for the Digital Industries business.

Please find my CV attached below. I look forward to hearing from you. It would be a privilege to bring my Teamcenter X experience back to a team building cloud applications at this scale.
