Dear Hiring Committee,

I saw the job post on **Simplify** and thought I'd be a good fit for it. I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as an **Associate Software Engineer, DevOps Engineer** at **WellSky**. With two years of production DevOps experience at Siemens Industry Software building and operating highly available cloud infrastructure, I am excited about supporting the infrastructure and applications behind WellSky's health and community care platform.

**Here are reasons that make me a great fit for the role:**

- **Highly available, scalable cloud infrastructure and applications:** At Siemens I supported the design, implementation, and maintenance of Teamcenter X infrastructure across cloud environments, and executed 44 production environment upgrades in four months while diagnosing and resolving live infrastructure and application issues to keep systems available.

- **Automation scripts and workflows for deployment, configuration, and monitoring:** I automated deployment and configuration workflows with Python and Bash, replacing legacy Ruby scripts and cutting deployment time by 40%, and monitored system performance with CloudWatch and Datadog, optimizing resources to reduce monthly cloud spend by 40%.

- **Continuous integration and continuous deployment pipelines:** I developed and maintained GitOps CI/CD pipelines with GitLab CI/CD and ArgoCD, enabling automated, auditable, rollback-capable deployments across 40+ environments, and migrated those environments to Kubernetes using Helm.

- **Troubleshooting, optimization, and on-call incident response for maximum uptime:** I participated in an on-call rotation supporting production systems, and designed an Ansible-based Blue-Green deployment framework that cut production upgrade downtime by 50% while enabling full environment recovery within 15 minutes.

- **Infrastructure as code, containers, and Microsoft tooling:** I have hands-on experience with Terraform, Docker, Kubernetes, PowerShell, Azure, SQL, Git, and Redis, and built a Go and Terratest validation framework that caught 95% of misconfigurations before production.

I am available for full-time work after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to WellSky and helping keep its care coordination platform reliable and scalable.

Please find my CV attached below. I look forward to hearing from you. I would be glad to help build the infrastructure behind software that makes healthcare easier to access and navigate.
