Dear Hiring Committee,

I saw the job post on **Handshake** and thought I'd be a good fit for it.

I am a Master's student in Computer Science at the University of Cincinnati, graduating December 2026, looking for a role as a **Software Engineer, New Grad** at **Zip**. With hands on experience building backend automation, full stack applications, cloud platforms, and reliable deployment systems, I am excited about the opportunity to contribute to **Zip** and support your engineering team building the core products and architecture behind enterprise procurement.

Here are reasons that make me a great fit for the role:

- **Building reliable, resilient products:** At Siemens Industry Software, I designed an Ansible based Blue Green deployment framework that reduced production upgrade downtime by 50% while enabling reliable rollback and recovery, and executed 44 production environment upgrades in 4 months while diagnosing and resolving live infrastructure issues without service interruptions.

- **Web application and API development with your stack:** I have hands on experience with Python, JavaScript, TypeScript, and React. In my PolicyPilot project, I built a full stack TypeScript application with a React frontend and an Express REST API, and designed 17 tool APIs with schema validation at every data boundary to eliminate a class of runtime type mismatch bugs.

- **Scalable frontend and backend components:** In my NYC Mobility Forecasting project, I built a RESTful API in Python and FastAPI serving real time predictions to a React dashboard, integrated with PostgreSQL and Redis caching, and containerized with Docker for scalable deployment.

- **Prior internship experience in a fast moving environment:** At Siemens Industry Software, I automated Teamcenter X infrastructure workflows with Python, replacing legacy scripts and cutting deployment time by 40% across AWS environments, gaining experience shipping quickly in a dynamic engineering organization.

I am available to work with you after my graduation in December 2026. As a Master's student at the University of Cincinnati and someone who values professionalism and growth, I am enthusiastic about contributing to **Zip** and helping build the AI powered procurement platform trusted by the world's leading enterprises.

Please find my CV attached below. I look forward to hearing from you. I would be excited to help Zip's engineering team keep moving quickly to solve complex technical and product challenges.
Regards,
